SOLAR ENERGY

- Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. This energy can be used to generate electricity or be stored in batteries or thermal storage.
- The Jawaharlal Nehru National Solar Mission (JNNSM), also known as the National Solar Mission (NSM) was commenced in January 2010. It marked the first time the government focused on promoting and developing solar power in India. Under the scheme, the total installed capacity target was set as 20 GW by 2022.

➤ Roof Top Solar Power Plant

- Indore Institute of Law as part of **GO GREEN INITIATIVE** has installed solar panels on a large scale in Blocks D and E.
- Institute has Installed **Roof Top Solar Plant of 58 KW** capacity as a part of its Go Green Initiative.
- The Institute aims at completely turning to Renewable Energy and become an Ideal Institute by becoming a Carbon Neutral in near Future.

BIOGAS PLANT

BIOGAS PLANT

- Biogas mainly comprises of hydro-carbon which is combustible and can produce heat and energy when burnt. Biogas is produced through a biochemical process in which certain types of bacteria convert the biological wastes into useful bio-gas. Since the useful gas originates from a biological process, it has been termed as bio-gas.
- Methane gas is the main constituent of biogas. Biogas helps in achieving Pollution Free Cities, Handling Organic Waste, Helpful for Women, Will Transform Energy Dependence, Addresses Handling of Livestock Manure, Reduces Carbon Dioxide Emissions, Will Improve Soil Quality, Reduce Gender Inequalities, Can be Helpful in Achieving SDG Goals.
- **Biogas Plant** can be installed in all the houses and they can drop the daily generating food waste into the biogas digester. The digester is designed in a way that bio-**Methanogenesis or Biomethanation** process will take place and food waste will be converted to methane and liquid manure. Liquid manure can be used as bio fertilizer by diluting it with equal quantity of water.
- Institute has Installed **Biogas Plant in the canteen of the Institute**. Through this the bio waste generated in the **Canteen's Kitchen**, waste food, and **Lawn waste** is used to produce Manure. This energy generated in the form of Biogas is then **used to cook food** in the kitchen.
- The **By-product** of biogas plant is **Liquid Manure** which is used in gardens situated in Institute's premises.
- Thus Institute's Canteen is **Self-sufficient** in terms of its energy requirement.
- **Indore Institute of Law (IIL)** as part of **GO GREEN CLUB INITIATIVE** has installed **biogas plant** in the college to energy through **alternative sources**.

USE OF LED BULBS/ POWER EFFICIENT EQUIPMENT

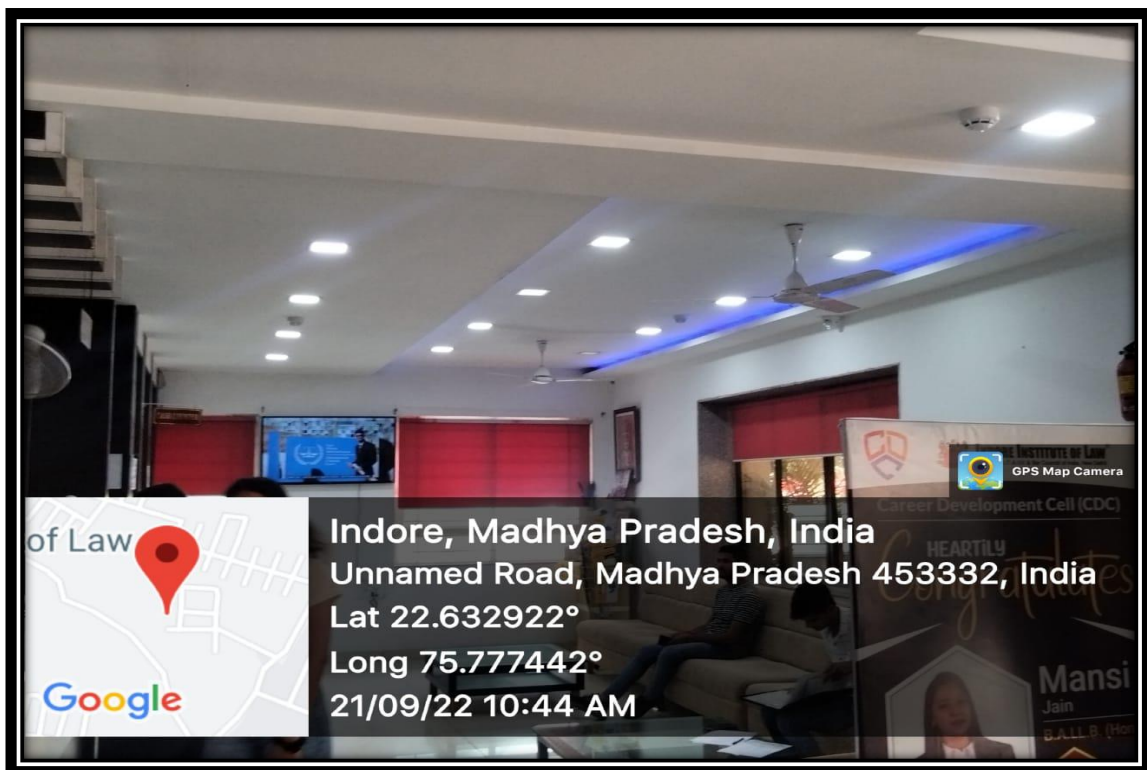

USE OF LED BULBS/POWER EFFICIENT EQUIPMENT

- A country can be said to be sustainable developed, it uses its energy resources effectively and efficiently. In this context, replacement of all conventional lamps with LEDs is a welcome step towards positive effect on 360 degrees spheres of country's development.
- Since **LEDs** use **less power**, they have a *lesser carbon footprint* and result in *lesser greenhouse emission*. As they are long lasting, smaller number of these bulbs go into landfills.
- **Indore Institute of Law** as part of **GO GREEN INITIATIVE** has replaced normal bulbs with *LED bulbs* and tube lights throughout the campus.
- Unlike CFLs, LEDs do not contain mercury or other heavy metals like lead and cadmium. Therefore, they result in *lesser environmental contamination* and less personal exposure of humans to hazardous material.
- The **Ratio of LED Lights** Compared with **Non – LED Light**, in the Institute is about **90:10**.
